Слово или фраза

DOMCK -

SWEETBAY.RU

Рациость

Вы выбрале это место нестроста. Что го в этом привлеков высокда: культура, яда, архитектура, природа, люда. Может быть, вы выдате это втервые, может, в дестный рак; в любом случае, пребывание здесь причесит вам огромное счастье.

payern

Вы новым радосты от того, что получили возможность увидеть эту часть нира. Вы вного работали, чтобы быть здесь, и сохдый дань живете в полной меря. Для мене радость приходит в общение с новыми людьми и заведение новых другой. Если это будет сделано на прекратном гилки, и передо нной будет тарелка свежих формов, тем лучки.

5. Принадленность

Может, вы здесь несколько дней, а может, уже несколько месяцев. Тем не менее, вы быстро нашли в этом месте свое любимов кафе, лучший худомоственный музей ком самое безметежное места, чтобы порядеть и подняль.

PROGRESS ASSESSMENTS

Когда вы проходите миме, парень в нестном магазине кивмет и мешет рукой. Можот, вы моглу бы адесь жить. Может быть, это чувство принадлежности может доиться вечно. З всегда знако, что достиг этой точки, когда продаваць не местном рынке внакот, что в собержось знакоть, еще до того, как и это сделая.

6. Разриарования

Даже саный спокойный путешествение иногдя достагает почих китемен. Все идет гладка, но один плохой день действительно может сыграть с твоим разумам. Тебе отрабили, или ты заблидиеся, или на воскые тебе никто не помогал. Легко разочароваться, когда вы устали, посодны, больны или зданови.

разочарования

Уногда, сам того не жалая, вы выражаете свое разочарование тем местом, в котором находитесь, независимо от того, заслуживает сно того или нет. Однокды в был гогов обезнать. Бангоос в своем укасном настроения, но это был воесе не город. У мене была инфекцие летака, вентичетор в моей комнале не работак, а ное вредитное карта была заморожена. С тех гор в некого раз возвращают (со здорожьны летами», кондиционером и работающей кредитной картой), и нее это навеческ.

Category Performance

Field Data

Over the last 30 days, the field data shows that this page has an $\mathbf{Moderate}$ speed compared to other pages in

the Chrome User Experience Report. We are showing The 75th percentile of FCP and The 95th

percentile of FID

First Contentful Paint (FCP)

Metric Category

First Input Delay (FID)

Metric Category

Overall Category

Origin Summary

All pages served from this origin have a **Slow** speed compared to other pages in the Chrome User Experience Report Over the last 30 days. To view suggestions tailored to each page, analyze individual page URLs.

Lab Data

First Contentful Paint

First Contentful Paint marks the time at which the first text or image is painted. Learn more

3.1 s

First Meaningful Paint

First Meaningful Paint measures when the primary content of a page is visible. Learn more

3.4 s

Speed Index

Speed Index shows how quickly the contents of a page are visibly populated. Learn more

5.4 s

First CPU Idle

First CPU Idle marks the first time at which the page's main thread is quiet enough to handle input. Learn more

4.7 s

Time to Interactive

Time to interactive is the amount of time it takes for the page to become fully interactive. Learn more

6.0 s

Max Potential First Input Delay

The maximum potential First Input Delay that your users could experience is the duration, in milliseconds, of the longest task.

Learn more

450 ms

Audit Data

Keep request counts low and transfer sizes small

To set budgets for the quantity and size of page resources, add a budget json file. Learn More

Eliminate render-blocking resources

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. **Learn More**

Potential savings of 1,800 ms

Efficiently encode images

Optimized images load faster and consume less cellular data. Learn More

Enable text compression

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. **Learn**More

Uses efficient cache policy on static assets

A long cache lifetime can speed up repeat visits to your page. Learn More

0 resources found

Minimize third-party usage

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. **Learn More**

Third-party code blocked the main thread for 0 ms

Network Round Trip Times

Network round trip times (RTT) have a large impact on performance. If the RTT to an origin is high, it's an indication that servers closer to the user could improve performance. **Learn More**

0 ms

Estimated Input Latency

Estimated Input Latency is an estimate of how long your app takes to respond to user input, in milliseconds, during the busiest 5s window of page load. If your latency is higher than 50 ms, users may perceive your app as laggy. **Learn More**

140 ms

First Contentful Paint (3G)

First Contentful Paint 3G marks the time at which the first text or image is painted while on a 3G network. **Learn More**5985 ms

Total Blocking Time

Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds.

Reduce JavaScript execution time

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. **Learn More**

1.5 s

Defer offscreen images

Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive. **Learn More**

Potential savings of 137 KiB

Server Backend Latencies

Server latencies can impact web performance. If the server latency of an origin is high, it's an indication the server is overloaded or has poor backend performance. **Learn More**

 $0 \, \text{ms}$

Properly size images

Serve images that are appropriately-sized to save cellular data and improve load time. Learn More

Potential savings of 8 KiB

Remove unused CSS

Remove dead rules from stylesheets and defer the loading of CSS not used for above-the-fold content to reduce unnecessary bytes consumed by network activity. **Learn More**

Potential savings of 29 KiB

Avoids enormous network payloads

Large network payloads cost users real money and are highly correlated with long load times. Learn More

Total size was 433 KiB

Minimize main-thread work

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. **Learn More**

5.7 s

Serve images in next-gen formats

Image formats like JPEG 2000, JPEG XR, and WebP often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. **Learn More**

Potential savings of 114 KiB

Avoid chaining critical requests

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Learn More

19 chains found

Avoids enormous network payloads

A large DOM will increase memory usage, cause longer ${\color{red} \textbf{Learn More}}$

460 elements

Avoid multiple page redirects

Redirects introduce additional delays before the page can be loaded. Learn More

Minify JavaScript

Minifying JavaScript files can reduce payload sizes and script parse time. Learn More

User Timing marks and measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. **Learn More**
