CELL GROUPS GLOBAL

We promote Peace, Prosperity, Healthy Living, Poverty reduction and planet preservation. Help us to observe all things and rightly divide the word of truth!

Welcome to the Healthy Living Ministries, a Non-Denominational online Ministry committed to supporting cell groups by sharing the [Divine Prosperity Business Model](#). I am inspired to share the Divine revelation that brings hope to those faced with financial challenges. This new Business Model is inspired, and the foundation is built on Faith, Wisdom, and Understanding!

We believe in God's promise of prosperity. Our mission is to promote our faith and reduce poverty by teaching the [Divine Prosperity Business Model](#). Financial blessings are in reach for those in need and are willing to learn and follow the business model at [myplanet.com](#).

We understand that human needs are similar, regardless of color or religion, most people have the basic desire to be happy and avoid suffering. We spend our lives working hard for fulfillment and have made progress, but we help ourselves better when helping others. This Divine revelation helps to reduce poverty and misery in our world while sharing the wealth.

Since the beginning of time, humans have worked hard to improve their external conditions to achieve happiness and find solutions for their problems. Unfortunately, human suffering continues to increase while happiness and peace decrease. This clearly shows that we must find new solutions for this age-old problem to fulfil God's promise to us.

Divine Promise, Protection, and Instruction: Psalm 23 and Matthew 6: 9 - 13. We are committed to bringing awareness to oppressive business models that can stomp on our pursuit of happiness.

The story, more than 20 years, I was faced with many challenges. I almost crossed over - I increased my faith and received the will to continue. I gained many revelations, including the [Divine Prosperity Business Model](#).

The [Divine Prosperity Business Model](#) revealed that every home is a sanctuary and business that can be used to reduce poverty, pay HOA fees, mortgages, student loans, car payments, retirement plans, and business debt. We can retire early allowing us time to do the things we love, strengthen our families, promote healthy communities, and bring awareness to our daily challenges. Learn more about the [Divine Prosperity Business Model](#) at [myplanet.com](#). Get connected and start your journey to financial freedom today!

I trust our faith will guide us as we unite to promote the spirit of god and the will to work for a common cause. Our goal is to make our world a better place for the present and future generations.

Lab Data

First Contentful Paint

First Contentful Paint marks the time at which the first text or image is painted. [Learn more](#)

3.7 s

First Meaningful Paint

First Meaningful Paint measures when the primary content of a page is visible. [Learn more](#)

3.7 s

Speed Index

Speed Index shows how quickly the contents of a page are visibly populated. [Learn more](#)

6.0 s

First CPU Idle

First CPU Idle marks the first time at which the page's main thread is quiet enough to handle input. [Learn more](#)

5.4 s

Time to Interactive

Time to interactive is the amount of time it takes for the page to become fully interactive. [Learn more](#)

5.8 s

Max Potential First Input Delay

The maximum potential First Input Delay that your users could experience is the duration, in milliseconds, of the longest task.

[Learn more](#)

110 ms

Audit Data

Keep request counts low and transfer sizes small

To set budgets for the quantity and size of page resources, add a budget.json file. [Learn More](#)

50 requests • 522 KiB

Eliminate render-blocking resources

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. [Learn More](#)

Potential savings of 2,010 ms

Efficiently encode images

Optimized images load faster and consume less cellular data. [Learn More](#)

Enable text compression

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. [Learn More](#)

Serve static assets with an efficient cache policy

A long cache lifetime can speed up repeat visits to your page. [Learn More](#)

36 resources found

Minimize third-party usage

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. [Learn More](#)

Third-party code blocked the main thread for 10 ms

Network Round Trip Times

Network round trip times (RTT) have a large impact on performance. If the RTT to an origin is high, it's an indication that servers closer to the user could improve performance. [Learn More](#)

0 ms

Estimated Input Latency

Estimated Input Latency is an estimate of how long your app takes to respond to user input, in milliseconds, during the busiest 5s window of page load. If your latency is higher than 50 ms, users may perceive your app as laggy. [Learn More](#)

10 ms

First Contentful Paint (3G)

First Contentful Paint 3G marks the time at which the first text or image is painted while on a 3G network. [Learn More](#)

7650 ms

Total Blocking Time

Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds.

90 ms

JavaScript execution time

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn More](#)

0.6 s

Defer offscreen images

Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time to interactive. [Learn More](#)

Potential savings of 7 KiB

Server Backend Latencies

Server latencies can impact web performance. If the server latency of an origin is high, it's an indication the server is overloaded or has poor backend performance. [Learn More](#)

0 ms

Properly size images

Serve images that are appropriately-sized to save cellular data and improve load time. [Learn More](#)

Remove unused CSS

Remove dead rules from stylesheets and defer the loading of CSS not used for above-the-fold content to reduce unnecessary bytes consumed by network activity. [Learn More](#)

Potential savings of 18 KiB

Avoids enormous network payloads

Large network payloads cost users real money and are highly correlated with long load times. [Learn More](#)

Total size was 522 KiB

Minimizes main-thread work

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn More](#)

1.7 s

Serve images in next-gen formats

Image formats like JPEG 2000, JPEG XR, and WebP often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. [Learn More](#)

Potential savings of 22 KiB

Avoid chaining critical requests

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

[Learn More](#)

Avoids enormous network payloads

A large DOM will increase memory usage, cause longer [Learn More](#)
175 elements

Avoid multiple page redirects

Redirects introduce additional delays before the page can be loaded. [Learn More](#)
Potential savings of 1,260 ms

Minify JavaScript

Minifying JavaScript files can reduce payload sizes and script parse time. [Learn More](#)

User Timing marks and measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. [Learn More](#)
